

CO2

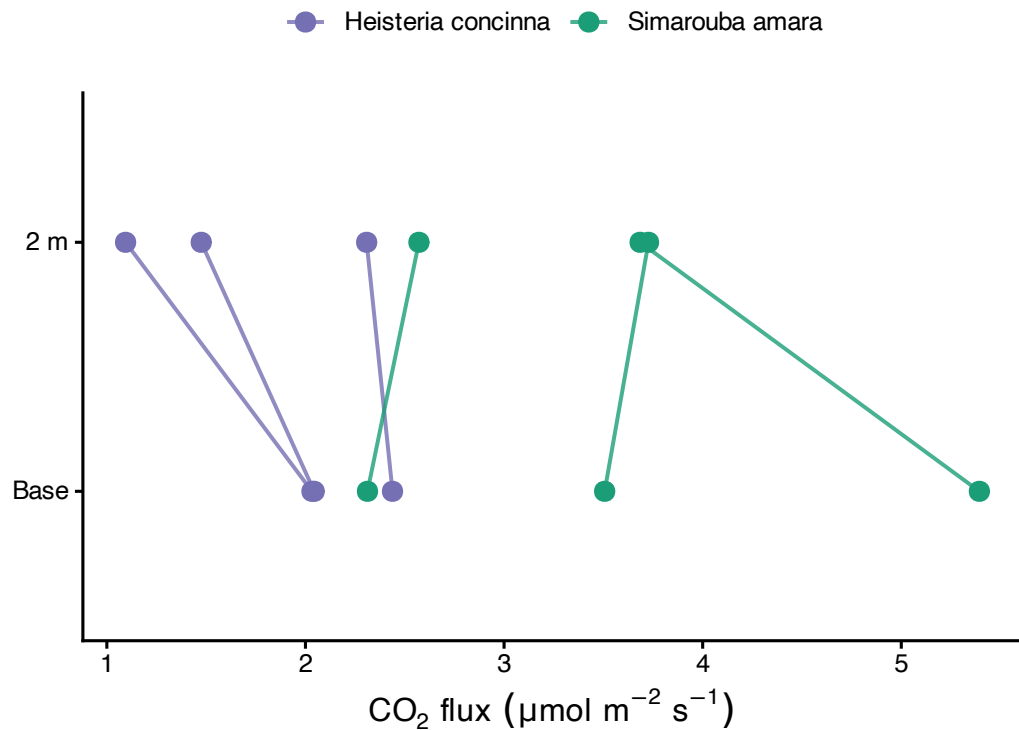

Figure 2 is a line graph showing the relationship between CH_4 flux (nmol $\text{m}^{-2} \text{s}^{-1}$) on the x-axis and CH_4 concentration (nmol l^{-1}) on the y-axis. The x-axis ranges from -0.02 to 0.01, and the y-axis has markers for 'Base' and '2 m'. A vertical dashed line at 0.00 indicates the MDF. Data points are connected by lines, showing a general increase in CH_4 concentration with increasing CH_4 flux. Heisteria concinna is represented by purple circles and lines, and Simarouba amara by green circles and lines. Open circles indicate values below the MDF, and filled circles indicate values above the MDF.
